THE INVESTMENT THESIS

Know the doctor before choosing a clinic.

AI-assisted medical discovery · Verified doctor publishing · Subscriber-only location search

MEDIPICK

A transparent knowledge-first pathway
from medical education to clinic discovery.

Korea-first | Curated knowledge index | B2B subscriptions + ads

THE PROBLEM

Too much medical information.
Too little decision context.

Hospital listings, clinical explanations, physician content and bookings live across disconnected channels.

Fragmented discovery

Consumers jump between maps, websites, medical associations, blogs and videos.

Trust uncertainty

Authorship, professional credentials, source evidence and advertising are not easy to separate.

Acquisition complexity

Clinics need content distribution, lead management and transparent performance reporting.

MARKET REFERENCE

A clearly identifiable healthcare supply landscape

Official National Health Insurance Service public institutional statistics · Q2 2026

105,271
Healthcare institutions incl. pharmacies
NHIS as of 30 June 2026

37,731
General clinics
NHIS Q2 2026

25,681
Pharmacies
NHIS Q2 2026

Includes 19,330 dental clinics. Total institutions are not addressable paying customers, signed partners, or MEDIPICK revenue.

THE PRODUCT

From consumer intent to knowledge and access

Explore → understand → discover → inquire → measure

01

Ask

Choose a specialty or ask a natural-language question.

02

Understand

Read curated physician blogs, shorts and linked evidence.

03

Find

Map only qualifying paid subscribers nearby.

04

Connect

Request contact or a booking; report campaign activity.

SEARCH DESIGN

Sponsored visibility without clinical misrepresentation.

Relevant paid subscribers appear first in a clearly labeled sponsor area; editorial knowledge remains independent.

Sponsor area

Paid, compliance-approved, active subscribers are displayed above general matching listings.

Source-led answers

Knowledge responses use approved source links and credential status, not ad spend.

Consumer control

Users choose location, specialty and source details; ads are not clinical rankings.

THE PUBLISHING NETWORK

Doctors' Blogger accounts become a reusable knowledge layer.

Link publicly owned Blogger content through ownership proof, human review and source attribution.

01

Connect

Physician enters a public Blogger URL.

02

Prove

Temporary unique code is published on the blog.

03

Review

Editorial approval is separate from credential checks.

04

Index

Approved titles, summaries and original links enter discovery.

BUSINESS MODEL

Recurring revenue through subscriptions and sponsored visibility.

Pricing is an unvalidated product experiment, not current customer pricing.

Starter · ₩199k/mo

Verified institution profile, approved content library and basic reporting.

Growth · ₩499k/mo

Eligible sponsored placements, subscriber map visibility and funnel dashboards.

Enterprise · custom

Multi-location campaigns and co-marketing under separate agreements.

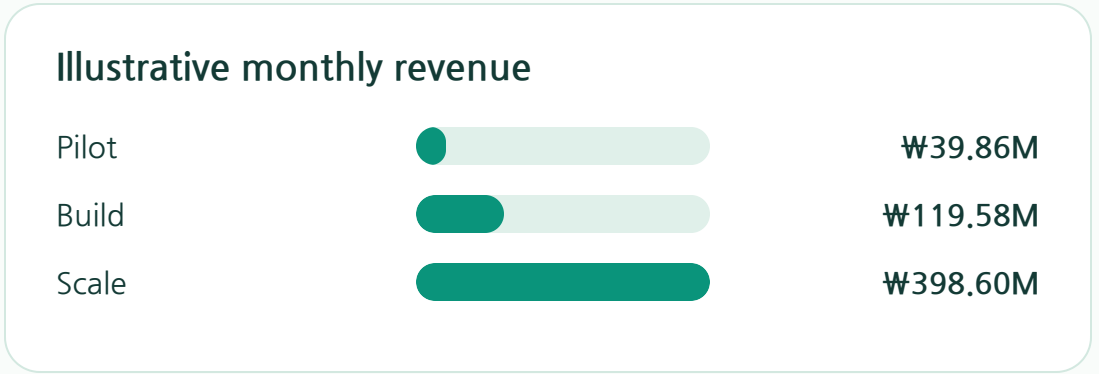

ILLUSTRATIVE REVENUE

Simple assumptions. Transparent arithmetic.

No actual paying subscribers, ARR or retention numbers are asserted.

Scenario	Starter	Growth	Illustrative MRR
Pilot	100	40	₩39.86M
Build	300	120	₩119.58M
Scale	1,000	400	₩398.60M

Accounts × ₩199,000 / ₩499,000 per month; excludes churn, taxes, selling costs and compliance overhead. Not projections.

GO-TO-MARKET

Build distribution around expert content, not hype.

An editorial-led growth loop with measurable clinic value.

01

0-90 days

Pilot three specialties and verify 30 contributing physicians.

02

3-6 months

Develop local SEO topic clusters and video-to-blog crosslinks.

03

6-9 months

Deliver campaign outcome reports and test renewal.

04

9-12 months

Expand geography and moderation capacity.

PRODUCT EXPERIENCE

Trust is designed into every surface.

AI-generated lifestyle imagery illustrates topics; it is never misrepresented as a real physician or clinic.

Explore

Specialty tiles, keyword input and guided AI questions.

Decide

Sponsor labels, evidence links, distance and profile details.

Operate

Single console for premium status, blogs, campaigns and leads.

COMPLIANCE BY DESIGN

Monetize discoverability.
Protect medical information.

Medical Service Act Art. 56, copyright, privacy and Google Maps attribution are hard constraints.

Advertising review

Only permitted advertisers; human review, clear sponsored labels and applicable ad approvals.

Data minimization

No symptom or diagnosis telemetry for advertisers. Location used per opt-in query.

Publishing permissions

Blog ownership proof; metadata and canonical links, not unauthorized full-content copying.

CURRENT DELIVERY

A working MVP, not yet a scaled production network.

Software automation has been tested. Third-party credentials and real customer performance have not.

Implemented

- Category and assisted AI search
- Paid-only nearby API
- Sponsor priority with review gates
- Blogger connection proof workflow
- Lead capture and advertiser metrics

Pending third-party readiness

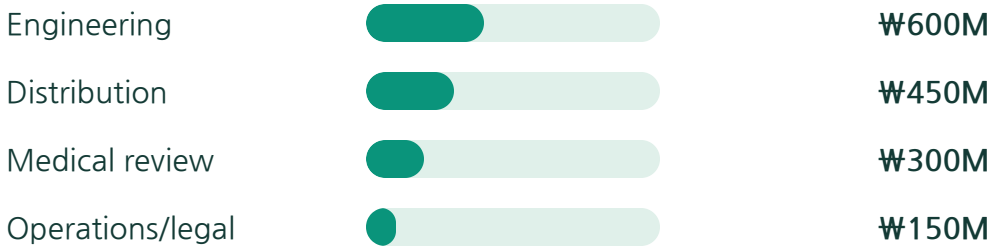

- Google Maps paid API setup & live QA
- Actual institution and specialist verification
- Operational Blogger / OAuth field validation
- Kakao / SMS provider approvals
- Security, privacy and legal sign-off

INVESTMENT DISCUSSION

Indicative seed capital ₩1.5B (discussion only)

Illustrative request; no implied commitment, valuation or fundraising success.

Proposed use of funds

Milestones to underwrite

- Verified hospitals and doctors
- Search-to-engagement conversion
- Paid subscription cohort conversion
- CAC, renewals and compliant ad ROI

Terms subject to diligence, legal review and demonstrated customer willingness to pay.

NEXT STEP

Turn discovery into informed healthcare choices.

Knowledge first. Transparent sponsors. Verified sources. A measurable distribution model for clinics.

MEDIPICK · KNOW FIRST. CHOOSE BETTER.

Demo-ready | Investor discussion draft | Unverified live API integrations
